

## EY interview experience

There was a **online test** and a **Group discussion** round and then there were three **Interview rounds**.

### **Online test:**

There were questions on **data interpretation(DI)** and **quantitative aptitude**. DI questions were really difficult.

### **Group Discussion Round:**

#### **Topic: Aadhar - Opportunities and Threats**

The group discussion went on for 10 min and there were 10 members in a group and the ones who didn't get a chance to speak during discussion were given a chance to speak at the end.

### **Round 1 (Technical):**

He asked me about tell him something about myself. And then he asked some questions related to my projects. He also asked me what differentiates you from other candidates and why should we select you. Then he asked me three puzzles.

**Puzzle 1** : You have a weighing machine(traditional one with two panes ) and there are 24 identical balls except that one weighs a little more or less. Find the most efficient way to use weighing scale to find the ball with different weight.

**Puzzle 2** : <https://www.geeksforgeeks.org/puzzle-3-calculate-total-distance-travelled-by-bee/>

**Puzzle 3:** The classic water jug problem and certain variations.

Then he asked me some more questions from my resume.

### **Round 2(HR):**

She asked me to give a brief description about what I have done and on what technologies I have worked over the time and why EY and what I have to offer to EY. And asked about my location preferences.

### **Round 3 (with executive director):**

He asked me to tell him something that isn't on my resume and explained me about how the work life would be at EY.

**Note-** At the end of every round they ask you to ask them a question and you should ask something that reflects how serious and passionate you are about the job and work.

**Tip: Be very well versed with your resume and all the projects that you have done. You should be able to confidently speak about the work you have done, contributions that you have made in the team projects. Also keep on discussing whatever approach is coming to your mind with the interviewer so as to help him guide you.**

Best of luck!
