

AXTRIA Interview Experience

By : Chaitali Satija (MCA 3 YEAR Course)

Round 1 (Online Assessment Test):-

The test had 75 questions to be solved in 90 minutes and was conducted on HirePro's platform. It consisted of questions of intermediate level on the topics – Data Interpretation and Quantitative Aptitude, and of easy level on the topics - Verbal Reasoning and C++/Data Structures.

There was only 1 section and questions from all topics were mixed and jumbled so you cannot think of completing one topic entirely first and then moving on to another.

Data Interpretation questions were quite lengthy so practice them thoroughly.

Result- Out of 106 students in OA, 22 students were selected for the next round.

Round 2 (Technical Interview Round):-

This round's duration was around 30 minutes. The Interviewer introduced himself and asked me to do the same. Then he asked me some questions about my most recent project – why I chose to make this project, what is the USP of my project, etc. He did not ask me anything about the technical part of the project. Then he asked me a simple SQL Query of "like" clause. Then he moved on to see my coursework from my resume and asked me to write code of "Bubble Sort" as DSA was mentioned in my coursework. I made a silly mistake in writing the code as I got a little nervous but I explained and dry ran my code in front of him and he was satisfied. Then he said your resume is suitable for our role as I had a lot of teamwork experience too. He asked me some behavioral questions like – where I see myself 5 years from now, do I have any plans for further education, etc. He concluded by asking me if I had any questions. I asked one question about professional growth and work-life balance. This concluded my interview.

Result- Out of 22 students in the Technical Interview Round, 19-20 students were selected for the next round.

Round 3 (HR Round):-

This round's duration was 30 minutes. The HR started by introducing herself and asked me to do the same. Then she scanned my resume and asked a lot of behavioral questions, including my strengths, and weaknesses, why I wanted to go into data analysis and not software engineering, why I chose Computer Science to be my career field after 12th, and many follow-up questions on the same. She also asked me to explain where I exactly saw myself 3 years, and 10 years from now. She concluded by asking me if I had any questions. I asked one question about professional growth and work-life balance. This concluded my interview.

Result- Out of 19-20 students in the HR Round, 4 students were finally selected for the Internship + FTE role.

Key Suggestions:-

1. Do thorough practice of Data Interpretation and other quantitative aptitude questions to clear the OA as most questions come from these 2 topics.
2. Be very confident in all your interviews.
3. Work on your communication skills. A confident interaction with the interviewer gives a very good impression.
4. Be very precise while giving your answers. Explain in detail only if you are asked to.
5. Keep a positive approach towards your selection. More than thinking about the result, focus on giving your ultimate best in whichever test or interview you sit.

ALL THE BEST!
