

Nagarro Interview Experience 2021

By Sristi Sonal, MCA(19-22)

The company came for 2 roles : SD(Software Developer) and CSD (Commando Software Developer)

First Round : OA (approx 40 students) [Mettl Platform]

There were 2 tests -

1. General Aptitude + Technical MCQs (1 hr)
Easy, quantitative, qualitative reasonings/aptitude,
Technical MCQs were c/c++ output based, oops, algorithms, c/c++ concepts
2. Coding Test - Based on the roles, it has 2 sections -
 - i) SD (3 Medium Hard level questions - 90mins)
 - ii) CSD (2 medium- easy level questions - 60 mins)

Their Instructions say that to be qualified for the SD role one has to solve SD questions and for CSD, you have to solve all SD + CSD questions in their respective section time.

Coding questions were story based and took time to understand and also not easy. So, i haven't submitted all the questions.

I have attempted only 2 out of 3 in which 1 gave compilation error and one was partially submitted and attempted both of the csd section's questions.. but for 1 all test cases were passed and i couldn't complete the 2nd one.

Elimination was based on these 2 rounds. 8 students were selected after that for round 2 (Technical round)

Round 2 : Technical Round (15 mins)

He didn't asked for introduction but mostly based on the coding test, oops concept and data structures

His questions were like -

- What do you think about the coding test (the coding test that we had attempted in OA round)
- How many questions have you attempted ?
- Why you have chosen that language (The language in which i have submitted the answer)
- What other language you know
- In which language you are more comfortable. (i told him java as i was in that)
- Based on my reply he asked language specific questions like
- Which inheritance is not applicable in java (i.e multiple inheritance) and why it is not applicable.
- Why we can implement more than one interfaces but not extend more than one classes ?

- Which collection frameworks you have used
- OOPS concept questions -
- What do you understand by Polymorphism
- Overloading and overriding
- Will overloading with same method name and same parameters but with different return type is possible ?
- Will you prefer arraylist or linked list
- Why static keyword is used ?

(few more oops and data structure concept questions)

Only 2 student were selected out of 8 for HR round (final round)

Round 3 : HR Round (10 min)

She asked

- introduction,
- briefly explain projects,
- she noticed the gap years in my resume so asked the reason,
- If i get selected, when i can join, in jan or after completion of college (seemed like she wasn't aware about our internship period so i told her about that
- Will it be okay to relocate to gurgaon
- What i know about nagarro and why i want to join here

Then she said she have nothing to ask and if i have any then to ask

Both of us (shortlisted) were selected and they considered us for SD profile as per coding questions points.

Note :

- As the coding questions were not easy and not easily understandable, that's why i think they have taken only 15 mins technical interview and 10min HR
- Be confident with your answers in the interview and explain it well.
- They could have asked the logic of coding questions so also be prepared with that as well.
- Do briefly read about the company before the HR interview.

All the best..Never lose Hope
