Round 2 : HR Round

The HR round started with the HR manager introducing herself to the candidates and giving a brief overview of the company and the role they are interviewing for. She then asked each candidate to explain their projects written on their resume and also give input on others' projects.

Round 3 :: Technical Round (1 hour)

The interviewer started by asking about my projects and we had a half an hour long discussion on one of my AI projects.

Next, the interviewer asked me about my understanding of object-oriented programming and asked a few basic OOP questions.
He asked me to write a code snippet for a simple class and object creation and some questions related to memory allocation and deallocation in Java.

Tips :
- Try not to fake. Only write those things in your resume that you're aware of and are confident enough to answer any question related to it.
- Do your research about the company.
- Stay calm and be positive.
