# QUANTIPHI's INTERVIEW EXPERIENCE
## Prashu Chaudhry

## Round 1: Online Assessment (1 hr 26mins)
Total Question – 80
78 MCQs, 2 coding Questions (Hard level) .
I attempted all MCQs and solved 1 coding question.
Result 16 students were selected.

## Round 2: Technical Interview (30 mins)
- The interviewer was some fresher he didn't even turned on his camera and started the interview with some intro and asked me to the same.
- After intro there were some very basic questions from resume about projects and tech stack.
- Then some very basic SQL commands and then he asked me to implement doubly linked list, I was doing it but he stopped me in between and moved on to the next question.
- Then asked a puzzle, it was a standard three jar puzzle available on GFG and other platforms.
- Then he said and asked me if I had any questions.
- Result 10 students were selected

## Round 3:  (10 mins)
- It was supposed to be an HR round but neither the HR came nor any other SDE.
- Interviewer came 30-35 mins late and he was some data modular, didn't even give me his intro neither he did turn on his camera nor he told me his name. And he hardly had any knowledge of programming, CS fundamentals whatsoever. (Very unprofessional honestly).
- Again, he asked me for my intro, asked a thing or two from my resume and then asked me to do any programming question of my choice in any language. I did prime number or not in java, he said okay and asked a few questions and then do you have questions for me.
- This rounded ended in like 10 mins max from his side, then I asked him a few questions about the company, work culture, tech stack etc. Then we ended the interview.

Result 8 students were selected.
My role -  Internship+FTE(FrameWork Engineer).

Best of luck!!
