Chegg India interview experience:

There was a online test and then there were three technical round followed by one HR round.

Online test:
There were 10 aptitude ques (easy), 1 coding ques(medium difficulty),
5 mcq on Ds and algo, 3 on RDBMS, 5 operating system. Test was of 60 minutes.

Round 1 (Technical) :
He started with my resume and asked questions on projects. Then he went on to ask ques on Django-python as I have mentioned it in my resume. Questions were what are middlewares and what are decorators in python. Then he asked me some basic questions regarding web development. Then asked me how would you implement a cache and then asked me to implement hashmap in any language of my preference.

Round 2 (Technical):
This round was mostly resume based, he asked me in depth about my projects and even asked me to explain some concepts that the projects involved(neural network and deep learning) and asked some other questions related to projects.

Round 3 (Technical):
This round was also resume based. He asked a lot of questions regarding my projects and technologies I had used.

Round 4 (HR):
This round involved questions regarding me , what I like ,what I have done also he asked me to explain inner join and outer join as if I am explaining it to a 5 year old and I also had to explain to that kid what a database is.

Tip: Be very well versed with your resume and all the projects that you have done. You should be able to confidently speak about the work you have done, contributions that you have made in the team projects. Also keep on discussing whatever approach is coming to your mind with the interviewer so as to help him guide you.

Note- At the end of every round they ask you to ask them a question and you should ask something that reflects how serious and passionate you are about the job and work.

Best of luck!

Shivam Agarwal
